PITCH DECK — 2026

EDU Media Systems

Modern media infrastructure for student voice, communication and digital learning.

THE PROBLEM

Schools are missing modern media infrastructure.

Student voice is becoming central to modern education, but the systems behind it haven't caught up. Equipment is fragmented, workflows are improvised, and programs depend on individual staff to keep them alive.

- Most schools lack scalable media systems
- Teachers are overloaded managing workflows
- Student voice opportunities are inconsistent
- Building a professional digital media program is hard
- Existing systems are fragmented and difficult to manage

WHY NOW

Communication is becoming one of the most important skills in modern education.

Schools are increasingly being asked to develop more than academic outcomes alone. EDU Media Systems exists to help schools operationalise communication, learner agency and student voice through real student-led media infrastructure.

MODERN EDUCATION IS SHIFTING TOWARD

- Communication
- Learner agency
- Confidence
- Collaboration
- Creativity
- Student voice
- Participation
- Wellbeing
- Digital capability

WHILE SCHOOLS ARE NAVIGATING

- Fragmented media systems
- Rising student disengagement
- Inconsistent communication opportunities
- Growing expectations around digital literacy
- Demand for authentic student participation

Students don't become confident communicators through worksheets alone. They become confident through repeated, real-world participation.

THE SOLUTION

One connected education media ecosystem.

EDU Media Systems combines hardware, workflow software and structured programs into one scalable infrastructure layer for modern schools.

INFRASTRUCTURE

EDU Media Systems

The connecting layer — programs, identity, training and ongoing support that keep school media systems alive.

HARDWARE

The Podcart

Portable student media studio. Rolls between classrooms, built to survive a school week, simple enough for students to operate.

SOFTWARE

Offloadr

Media workflow software that turns recording sessions into clean, publish-ready projects automatically.

the PODcart

Portable student media infrastructure for modern schools.

A complete production setup that rolls between classrooms — built to survive a school week and simple enough for students to operate.

- Portable production setup
- Podcasting and video recording
- Mobile deployment between rooms
- School event coverage ready
- Flexible classroom integration

Offloadr

Media workflow software built for education environments.

The operational layer that turns a recording session into a clean, publish-ready project — automatically. Uploads, organises, verifies and prepares structured media projects without teacher overhead.

Session 042 — Quick 15	Verified · 8 files · 12.4 GB
Assembly Recap — Term 4	Uploading · 3 of 6 files
Year 5 Podcast — Episode 12	Publish-ready
Leadership Interview	Organised · awaiting review

HOW OFFLOADR WORKS

From recording session to publish-ready project.

Offloadr automates the operational side of school media — no manual file collection, no fragmented folders, no teacher overhead.

01
Record
Students record podcasts, interviews, debates or classroom sessions.

→

02
Offload
Media uploads automatically into the project workspace.

→

03
Verify
Files checked and confirmed before sessions close.

→

04
Organise
Projects grouped into clean, structured folders.

→

05
Handoff
Teachers, editors or media teams receive organised projects instantly.

→

06
Publish
Exported for YouTube, assemblies, newsletters or classroom reflections.

Publish destinations include school YouTube channels, internal school media, parent communication, Vimeo, assemblies, newsletters and classroom reflections.

PRODUCER MODE — LIVE CONFIDENCE

Student-friendly production confidence.

Designed to empower students without exposing complex system controls. Admin functions stay hidden — students see only what they need to record with confidence.

LIVE

Recording status

A clear visual signal showing the session is capturing.

LIVE

Audio monitoring

Per-mic levels surfaced in plain language.

LIVE

Camera connectivity

Frame, focus and source confirmed before takes begin.

PRODUCER MODE — SESSION INTEGRITY

Every session ends with a clean, verified project.

The session doesn't end when the recording stops. Producer Mode keeps students and teachers informed through upload, verification and handoff — so nothing slips through the cracks.

LIVE

Session timer

Visible runtime so sessions stay structured and on track.

POST

Upload status

Every file confirmed offloaded and integrity-checked.

POST

Storage health

Free space and project size monitored in-app.

ALIGNED WITH THE FUTURE OF EDUCATION

Aligned with the future of education.

The future direction of education is increasingly focused not only on what students know, but how confidently they can communicate, contribute and participate.

EDU Media Systems helps schools transform communication and learner agency into practical student experiences — confidence built through repeated participation in authentic communication environments.

- Learner agency
- Communication capability
- Oral communication
- Authentic speaking environments
- Participation
- Student voice
- Confidence
- Digital capability

EDUCATION PROGRAMS

Structured programs built into the ecosystem.

Schools receive structured implementation support and program frameworks to help staff and students confidently launch media initiatives — without inventing the format from scratch.

- Podcast programs
- Student interviews
- Debates
- Cultural discussions
- Media literacy
- Communication workshops
- Digital storytelling
- Leadership opportunities

BUILDING SCHOOL MEDIA IDENTITY

More than equipment. A complete school media program.

EDU Media Systems helps schools build student-led media programs that are properly branded, properly produced and embedded into school culture — programs students genuinely want to participate in.

BRAND IDENTITY

- Custom media branding
- Logo development
- School-colour integration
- Thumbnail templates
- Intro and outro packages

PRODUCTION & PUBLISHING SYSTEMS

- Branded production setup
- Overlays and graphics
- YouTube channel setup
- Upload and publishing workflows
- Reusable publishing templates

DESIGNED FOR REAL SCHOOL ENVIRONMENTS

Built around how schools actually operate.

EDU Media Systems is designed to integrate into everyday school life — not sit unused in a storage room. A typical week can look like this:

MON	TUE	WED	THU	FRI
Student leadership podcast	Quick 15 classroom reflections	Assembly recap production	EMS Network live participation	Student interviews & wellbeing discussions

Not every session needs a major production or public publishing. Much of the strongest content stays classroom-based, teacher-assessed and parent-shared — oral presentations, literacy reflections, leadership communication, debate programs, event coverage and school storytelling.

WHY SCHOOLS STAY SUBSCRIBED

The subscription is the ecosystem.

The rollout is only the beginning. EDU Media Systems is designed to provide ongoing activation, support and participation long after installation — so schools never feel: "we have the equipment, but what do we actually do with it?"

ONGOING SUPPORT

- Implementation guidance
- Operational coaching
- Editing assistance
- Workflow & booking management
- Templates and teacher guidance
- Publishing & YouTube support

EMS NETWORK

- Interschool podcasts and debates
- Live guest sessions and Q&A
- Student leadership panels
- Cultural and community discussions
- Communication initiatives
- Media literacy workshops

The value is participation, representation and student voice — not celebrity access.

BUILT TO SCALE ACROSS EDUCATION

Built to scale — from one classroom to a whole department.

Designed from day one for single schools, multi-campus rollouts and department-level deployments — same hardware, same workflows, same software, regardless of footprint.

TIER 1

Single school

One Podcart, one workflow, one program — operational in a term.

TIER 2

Multi-campus rollout

Standardised deployment across grouped sites with shared identity.

TIER 3

Department integration

Enterprise licensing across regions and education systems.

THE OPERATIONAL LAYERS

One operating model. Three layers that scale with you.

The same infrastructure stack underneath every deployment — so a single school and a multi-region department run on identical foundations.

LAYER

Portable infrastructure

Hardware moves between rooms, sites and events without reconfiguration.

LAYER

Cloud-based workflows

Project state, uploads and handoffs accessible from anywhere.

LAYER

Standardised systems

One operating model from primary classroom to department office.

FINAL VISION

The future of student-led media.

EDU Media Systems is building the infrastructure layer for modern student communication, media literacy and digital storytelling.

DESIGNED FOR SCHOOLS — BUILT FOR THE FUTURE.
