PITCH DECK — 2026

EDU Media Systems

Modern media infrastructure for student voice, communication and digital learning.

THE PROBLEM

Schools are missing modern media infrastructure.

Student voice is becoming central to modern education, but the systems behind it haven't caught up. Equipment is fragmented, workflows are improvised, and programs depend on individual staff to keep them alive.

- Most schools lack scalable media systems
- Teachers are overloaded managing workflows
- Student voice opportunities are inconsistent
- Building a professional digital media program is hard
- Existing systems are fragmented and difficult to manage

WHY NOW

Communication is becoming one of the most important skills in modern education.

Schools are increasingly being asked to develop more than academic outcomes alone. EDU Media Systems exists to help schools operationalise communication, learner agency and student voice through real student-led media infrastructure.

MODERN EDUCATION IS SHIFTING TOWARD

- Communication
- Learner agency
- Confidence
- Collaboration
- Creativity
- Student voice
- Participation
- Wellbeing
- Digital capability

WHILE SCHOOLS ARE NAVIGATING

- Fragmented media systems
- Rising student disengagement
- Inconsistent communication opportunities
- Growing expectations around digital literacy
- Demand for authentic student participation

THE SOLUTION

One connected education media ecosystem.

EDU Media Systems combines hardware, workflow software and structured programs into one scalable infrastructure layer for modern schools.

INFRASTRUCTURE

EDU Media Systems

The connecting layer — programs, identity, training and ongoing support that keep school media systems alive.

HARDWARE

The Podcart

Portable student media studio. Rolls between classrooms, built to survive a school week, simple enough for students to operate.

SOFTWARE

Offloadr

The missing link between recording and editing — uploads, verifies and organises every file the moment a session ends.

the PODcart

Portable student media infrastructure for modern schools.

A complete production setup that rolls between classrooms — built to survive a school week and simple enough for students to operate.

- Portable production setup
- Podcasting and video recording
- Mobile deployment between rooms
- School event coverage ready
- Flexible classroom integration

Offloadr

The missing link between recording and editing.

Offloadr doesn't record — it takes over when the session ends. It automatically uploads, checksum-verifies and organises every file into a clean, publish-ready project, so teachers and student media teams stop chasing files and start producing.

Session 042 — Quick 15	Verified · 8 files · checksum confirmed
Assembly Recap — Term 4	Uploading · 3 of 6 files · resumable
Year 5 Podcast — Episode 12	Publish-ready · share link issued
EMS Debate Session	Processing · audio + 2 cams
Parent Reflection Upload	Verified · ready for review
Leadership Interview	Organised · awaiting teacher review

HOW OFFLOADR WORKS

Five steps. Nothing the editor has to chase.

Offloadr is the layer between recording ending and editing beginning. No manual file collection, no fragmented folders, no teacher overhead — every session lands as a clean, verified project.

01

Record

On the same gear you already use. Offloadr stays out of the recording path.

→

02

Upload

Files land in the right project folder, every time. Resumable if the connection drops.

→

03

Verify

Checksum per file. A missing-file checklist runs against the expected setup.

→

04

Handoff

One revocable share link with producer notes attached. No login for the editor.

→

05

Publish

A clean project ready for YouTube, assemblies, newsletters or classroom reflections.

PRODUCER MODE — LIVE CONFIDENCE

Operational confidence before you press record.

Producer Mode runs in the studio. It checks the kit, watches the uploads and tells students and teachers the moment something expected from the session isn't there yet — admin functions stay hidden.

PRE-RECORD

Kit checks

Audio, cameras, drive and helper app all verified before record.

PRE-RECORD

Recording readiness

A single status — Ready, Warning, or Not ready. No guessing.

IN SESSION

Take organisation

Tag take number, talent and mic assignments while it's still fresh.

PRODUCER MODE — SESSION INTEGRITY

Production doesn't end when recording stops.

Every file accounted for, every project verified, every gap surfaced before it becomes a Tuesday-morning DM hunt for the missing lav from take 4.

POST

Session status

Uploads land in real time. You see what's still on a card before anyone leaves the room.

POST

Project verification

What landed is compared against the expected setup for this project.

POST

Missing-file alerts

Flagged before the editor or teacher ever opens the project. Nothing slips.

ALIGNED WITH THE FUTURE OF EDUCATION

Aligned with the future of education.

The future direction of education is increasingly focused not only on what students know, but how confidently they can communicate, contribute and participate.

EDU Media Systems helps schools transform communication and learner agency into practical student experiences — confidence built through repeated participation in authentic communication environments.

- Learner agency
- Communication capability
- Oral communication
- Authentic speaking environments
- Participation
- Student voice
- Confidence
- Digital capability

EDUCATION PROGRAMS

Structured programs built into the ecosystem.

Schools receive structured implementation support and program frameworks to help staff and students confidently launch media initiatives — without inventing the format from scratch.

- Podcast programs
- Student interviews
- Debates
- Cultural discussions
- Media literacy
- Communication workshops
- Digital storytelling
- Leadership opportunities

BUILDING SCHOOL MEDIA IDENTITY

More than equipment.
A complete school media program.

EDU Media Systems helps schools build student-led media programs that are properly branded, properly produced and embedded into school culture — programs students genuinely want to participate in.

BRAND IDENTITY

- Custom media branding
- Logo development
- School-colour integration
- Thumbnail templates
- Intro and outro packages

PRODUCTION & PUBLISHING SYSTEMS

- Branded production setup
- Overlays and graphics
- YouTube channel setup
- Upload and publishing workflows
- Reusable publishing templates

DESIGNED FOR REAL SCHOOL ENVIRONMENTS

Built around how schools actually operate.

EDU Media Systems is designed to integrate into everyday school life — not sit unused in a storage room. A typical week can look like this:

MON	TUE	WED	THU	FRI
Student leadership podcast	Quick 15 classroom reflections	Assembly recap production	EMS Network live participation	Student interviews & wellbeing discussions

Not every session needs a major production or public publishing. Much of the strongest content stays classroom-based, teacher-assessed and parent-shared — oral presentations, literacy reflections, leadership communication, debate programs, event coverage and school storytelling.

WHY SCHOOLS STAY SUBSCRIBED

The subscription is the ecosystem.

The rollout is only the beginning. EDU Media Systems is designed to provide ongoing activation, support and participation long after installation — so schools never feel: "we have the equipment, but what do we actually do with it?"

ONGOING SUPPORT

- Implementation guidance
- Operational coaching
- Editing assistance
- Workflow & booking management
- Templates and teacher guidance
- Publishing & YouTube support

EMS NETWORK

- Interschool podcasts and debates
- Live guest sessions and Q&A
- Student leadership panels
- Cultural and community discussions
- Communication initiatives
- Media literacy workshops

The value is participation, representation and student voice — not celebrity access.

BUILT TO SCALE ACROSS EDUCATION

Built to scale — from one classroom to a whole department.

Designed from day one for single schools, multi-campus rollouts and department-level deployments — same hardware, same workflows, same software, regardless of footprint.

TIER 1

Single school

One Podcart, one workflow, one program — operational in a term.

TIER 2

Multi-campus rollout

Standardised deployment across grouped sites with shared identity.

TIER 3

Department integration

Enterprise licensing across regions and education systems.

THE OPERATIONAL LAYERS

One operating model. Three layers that scale with you.

The same infrastructure stack underneath every deployment — so a single school and a multi-region department run on identical foundations.

LAYER

Portable infrastructure

Hardware moves between rooms, sites and events without reconfiguration.

LAYER

Cloud-based workflows

Project state, uploads and handoffs accessible from anywhere.

LAYER

Standardised systems

One operating model from primary classroom to department office.

FINAL VISION

The future of student-led media.

EDU Media Systems is building the infrastructure layer for modern student communication, media literacy and digital storytelling.

DESIGNED FOR SCHOOLS — BUILT FOR THE FUTURE.
